

Dynamic Measurement Webinar #001

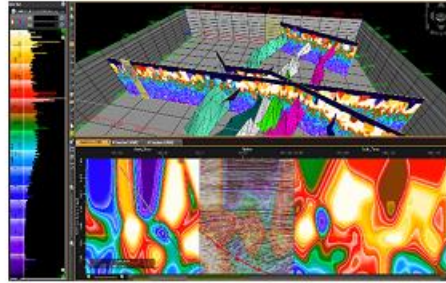

Thursday, 23 March 2017, 10:00 AM or repeated at 3:00 PM Central Time

Lead Presenter: **H. Roice Nelson, Jr.**, geophysicist, B.S. Geophysics University of Utah 1974, founder Landmark Graphics, with 45+ years of experience in oil, gas, and mineral exploration

Use browser, go to: <https://www.freeconferencecall.com/wall/581-246-945>, & join meeting

Topic: **Lightning Analysis: Creating Geo-Frameworks Faster, Cheaper, and Safer**

#007 Lightning Webinar

Dynamic Measurement is pleased to announce the first in a planned series of webinars about lightning technology. The webinar will be posted at www.dynamicmeasurement.com/webinars/webinar001 for those who cannot attend.

Dynamic Measurement lightning database analytics help explorers understand geology anyplace in the world (out to at least 300 foot water depths). Dynamic map and volume deliverables allow explorers to build a geologic framework faster (a couple of months), less expensively (\$5,850 for a 5,280 foot radius 3.14 square miles SPOTSM analysis or \$73,060 for a 100 square mile D.NSEMSM project), and safer (data is already collected and just needs to be ordered, cleaned, and processed) than any other available geophysical data type. Contact Dynamic Measurement (281.579.0172 or info@dynamicmeasurement.com), describe your exploration needs, and our team will help you use Dynamic's lightning analysis to support your natural resource exploration work.
